(f) CX , a professional accountant, is facing a dilemma. She is working on the preparation of a long term profit forecast required by the local stock market listing regulations prior to a new issue of equity shares.

At a previous management board meeting, her projections had been criticised by board members as being too pessimistic. She was asked to review her assumptions and increase the profit projections.

She revised her assumptions, but this had only marginally increased the forecast profits.

At yesterday's management board meeting the board members had discussed her assumptions and specified new values to be used to prepare a revised forecast. In her view the new values grossly overestimate the forecast profits.

The management board intends to publish the final revised forecasts.

## Required:

Explain the ethical problems that CX faces and identify her possible options. You should refer to CIMA's Code of ethics for professional accountants
